Homeland Infrastructure Power Security and Assurance Incentives Act of 2003 - Instructs the Secretary of Energy to establish within the Department of Energy an Advanced Technology Incentives Program to provide funding to accelerate development and deployment of new advanced technologies such as fuel cells, turbines, hybrid, and storage system power technologies.

Requires the use of such funding for: (1) eligible owners or operators to support efforts to reduce system costs, and improve the performance and reliability of advanced distributed power generation and energy storage systems; and (2) demonstrating the capability of new technologies to increase power generation through enhanced operational, economic, and environmental performance.

Directs the Secretary to: (1) evaluate security and assurance performance improvement; (2) define locations and facilities that would benefit most from such improvements; and (3) determine the criteria for facilities that generate or store and distribute electric energy that improves the security and reliability of the nation's electricity grid and protects locations critical to its security (including military installations, financial institutions, medical and first responder facilities).

Actions Timeline

- **Apr 1, 2003:** Referred to the Subcommittee on Energy.
- **Mar 27, 2003:** Introduced in House
