Nuclear Fuel Security Act

This bill establishes new programs and expands existing programs to increase domestic supplies of certain types of low-enriched uranium.

First, the Department of Energy (DOE) must establish a program to increase the production of certain types of low-enriched uranium by U.S. nuclear energy companies.

Second, DOE must expand the existing American Assured Fuel Supply Program to ensure the availability of certain types of domestically produced uranium in the event of a supply disruption.

Third, DOE must establish a demonstration program to make certain types of low-enriched uranium available from its inventories, stockpiles, or allies to meet the needs and schedules of advanced nuclear reactor developers until such time that commercial enrichment and deconversion capability for the uranium exists in the United States at a scale sufficient to meet future needs.

Actions Timeline

- **Feb 24, 2023:** Referred to the Subcommittee on Energy, Climate and Grid Security.
- **Feb 17, 2023:** Introduced in House
- **Feb 17, 2023:** Referred to the Committee on Energy and Commerce, and in addition to the Committee on Science, Space, and Technology, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned.
