Marine Mammal Climate Change Protection Act

This bill establishes requirements to protect marine mammals adversely affected by climate change, including by establishing a program within the National Oceanic and Atmospheric Administration (NOAA) to monitor the adverse impacts of climate change on marine mammals.

In addition, it also requires NOAA's National Marine Fisheries Service (NMFS) and the U.S. Fish and Wildlife Service (USFWS) to issue regulations that list marine mammal species in waters under U.S. jurisdiction for which climate change is more likely than not to result in a decline in population abundance, an impeded population recovery, or a reduced carrying capacity (i.e., the maximum population of a marine mammal species that an area will support without undergoing deterioration). The NMFS and the USFWS must update the list at least once every five years and issue regulations that include climate impact management plans for species on such list.

The bill also directs the NMFS and the USFWS to review agreements with foreign governments concerning the management of marine mammals that are or may be affected by climate change. The Department of State must initiate amendments to such agreements or negotiate the development of such agreements in a manner consistent with the goals of the bill.

Actions Timeline

- **Mar 22, 2023:** Referred to the Subcommittee on Water, Wildlife, and Fisheries.
- **Mar 7, 2023:** Introduced in House
- **Mar 7, 2023:** Referred to the House Committee on Natural Resources.
