Accelerating Broadband Permits Act

This bill makes specified changes to processes for federal review of certain communications and broadband infrastructure projects.

Specifically, the bill requires executive branch agencies to identify and address factors that contribute to delays in their review of applications for easements, rights-of-way, or leases related to communications infrastructure projects. (Under current law, executive branch agencies with control over buildings or property may grant such easements, rights-of-way, or leases to entities seeking to install, construct, modify, or maintain communications facilities. Generally, agencies must act on such applications within 270 days.)

Under the bill, agencies must develop controls to ensure accurate tracking of processing times for such applications and take action to address factors contributing to delays as they occur. Agencies must also establish methods to alert employees when the agency is at risk of failing to meet the 270-day deadline with respect to a particular application. (These provisions were recommended by the Government Accountability Office in an April 2024 report to Congress entitled *Broadband Deployment: Agencies Should Take Steps to Better Meet Deadline for Processing Permits.*)

Separately, the bill lowers the cost threshold for certain broadband infrastructure projects to qualify as *covered projects* under the Fixing America's Surface Transportation (FAST) Act from \$200 million to \$5 million. Such projects qualify for expedited federal environmental review.
